Entered according to Act of Congress,
in the year 1890, by The Connecticut Mutual Life Insurance Company,
in the Office of the Librarian of Congress, at Washington.

PREFACE.

In the year 1882, the Connecticut Mutual Life Insurance Company changed its assumptions as to mortality and interest for all policies to be thereafter written, from the Combined Experience Table of Mortality and four per cent. annual interest to the American Table and three per cent.

At a special meeting of the directors of the Connecticut Mutual Life Insurance Company, held the 23d day of March in that year, it was voted:

"That the reserves and net premiums upon all premium paying policies hereafter issued by this company, and upon all paid-up policies issued upon surrender of the same, be computed on the assumption of the rate of mortality shown by the American Experience Table, so called, and three per cent. annual interest."

The tables contained in this volume were prepared solely for the execution of the directions contained in the foregoing vote, and are, therefore, in great part, limited to the forms of policies which have been in use by this company since the adoption of this standard. They are published at the present time for the reason that they have been so much in request by Actuaries as to lead to the belief that they may be, even in this limited form, a useful and not unwelcome contribution to the literature of life insurance.

A comparison of the tables with those based upon the assumption of four per cent. annual interest will disclose to each company the practical problems involved in a change in its interest assumptions; which problems are neither few nor trifling. For doubtless, in some instances at least, so conservative a step as the assumption of three per cent. interest would have to be prepared for, or accompanied, by other measures of a very conservative character.

The main commercial feature of the situation would be the considerable increase in premiums required by this change, if the same percentage of

loading as is now commonly in use were retained. This feature was dealt with by the Connecticut Mutual by a reduction in the loading, giving, therefore, a much less margin for expenses than is provided by the four per cent. premiums in common use.

When this change of assumption was made in 1882 by the Connecticut Mutual, most, if not all life underwriters in America regarded it as an ultra conservative step, unnecessarily taken in view of a situation which they believed would soon change in favor of higher interest rates; and some went so far as to criticize the locking up of a larger reserve, as an act of unnecessary harshness to policy-holders, although this criticism was partly disposed of by the greater value of the policy in case of an ante-mortem settlement, and by the greater surplus interest earned on a three per cent. basis. The true question at issue, however, is the necessity of the change, in view of the nature of a reserve and its function, and the length of time it may be exposed to financial contingencies, and of the prime fact that any change must be made long enough before the actual rate drops below the former assumed rate to allow the reserves and net premiums based on the old rate to earn their assumed interest without disturbance; otherwise is it useless to change; insolvency is certain. Such a change is, necessarily, a matter of long prevision.

When this change was made, a decline in the rate of interest upon desirable investments, whether in mortgage loans, government, state or municipal securities, or in railway securities of the better class, had been, for several years, in rapid progress. The decline had already become a very material one; but the important question, of course, was as to the probable future. Our country, after recovering from the effects of the destructive civil war, the financial disturbance consequent upon it, and the liquidation following the inflation and speculation which covered a period of more than twelve years, had entered upon a course of development which was wholly unprecedented. We were receiving an enormous influx of population which was added at once to our industrial forces. We were producing wealth upon a scale never before conceived, and faster than it could find satisfactory legitimate use in the enterprises which had produced it; and it was pressing for other investment. Our financial relations with the old world had so improved that the rate of interest in each country had become sensitive to changes in that of the other, and the rate in this country was rapidly tending to approximate that of foreign centers. A consideration of the character, extent, and relations of the causes which were actively operating and had already produced so marked a change, led us to the conclusion that, until they were interrupted, their effect in a continuous fall in the rate of interest must continue. So long as the world

remained at peace, we could see nothing likely to interrupt the operation of these causes, except the ordinary financial fluctuations growing out of speculation and liquidation, which occur with considerable regularity in commercial history, but which, however severe for the time, are, after all, mere incidents, and not the determining causes of the great current of that history. It seemed but reasonable to anticipate that the great natural resources of this country, continuously developed by its ever increasing energy and intelligence, and offering attractive fields to foreign enterprise and capital, must, on the whole, produce wealth so rapidly as to cause a generally steady, if slow, decline in the rate of interest.

The first question resulting from this conclusion was as to the probable length of time that this company could safely count upon earning four per cent. annual interest upon its entire body of investments.

The investments of a life insurance company should be of such a choice character as to secure very favorable consideration in the rate of interest which they must pay for the use of money. The American Table of Mortality assumes that no life will extend beyond its 96th year. We insure persons at the age of 20 years for the whole term of life. We do not issue new policies upon persons over 65 years of age. In making our calculations we must assume that each particular contract may, and act as if we were certain that it would run its entire possible term; that is, insuring a man 20 years old, we must provide for earning at least a certain rate of interest for 76 years. For a man 65 years old we must provide for earning it 31 years; and so for each period included between the two. The question, then, for us was, had we such reasonable certainty of earning four per cent. for 76 years, or even for 31 years on all our assets taken together, assuming them to be of the proper character, that we were warranted in making a solemn contract upon that basis? We could not feel that the probability of earning that rate, for that period, was sufficient to warrant us in staking the solvency of this company, and the integrity of the provision men are asked to make here for the future of their families, upon the realization of that rate. The experience of the last eight years has but confirmed that judgment.

In considering the question of a safe rate to assume, after giving such weight as we were then able to do to the consideration of the causes operating to produce a decline in the rate of interest, the probability of a further review of the question in the perhaps not very distant future, and the difficulties incident to a frequent change of assumption, it was thought best to assume a rate which, so far as could then be judged, would be, for a long time, considered entirely conservative. We consequently adopted three per cent. as upon the whole the proper assumption.

In this action the Connecticut Mutual still stands alone among American companies. Responsible criticism of its action has, however, nearly if not quite ceased. The causes which were operating in 1882 have been in continuous action ever since, with progressive results. The rate of interest upon every item that should enter into the assets of a life insurance company, is distinctly lower than it was in 1882. The causes which have produced that further decline are still in full operation, and there is no present apparent condition of affairs likely to permanently interrupt their further and indefinite progress. There is nothing yet in sight to change the current, or to affect it further than by a mere ripple on its surface. If the question of earning four per cent. interest for a period of 30 to 75 years was at all a doubtful one eight years ago, it has, by every event which has occurred during that period, become a still more doubtful one to-day. The degree of its probability has most decidedly changed, and not for the better.

The various speculative and semi-investment policies now being so extensively urged upon the public, do, by postponing all dividends for many years, and by allowing the companies issuing them unrestricted control and use of the surplus all the while accumulating, afford to these companies some practical protection against the future contingencies of the interest rate ; but only a limited and partial protection both as to amount and as to time.

When the public has learned that it cannot afford to pay life insurance expenses in order to use life insurance companies either for speculations or as savings banks, but can afford to pay them only for family protection, and because so great and immediate protection can be got in no other way, the interest assumption will assume its true importance, and may assume a magnitude and a gravity proportioned to the delay in facing it.

Jacob L. Greene

President.

HARTFORD, September 1, 1890.

NOTE.

The following tables were computed for office use. They were not computed with that regard for extreme and, for practical purposes, unnecessary accuracy which professional pride might perhaps have dictated had they been prepared with a view to publication. It is hoped, however, that they will be found reasonably accurate and free from errors. In such a mass of figures typographical errors are almost unavoidable. It will be considered a favor if any errors found are called to my attention.

The computations were made upon the usual assumption, that death claims are payable at the end of the policy year in which death occurs. The work was done by the aid of the arithmomêtre, and by formulæ adapted to its use, and permitting of ready verification of results. Acknowledgment is due to Mr. Charles Hildebrand, Assistant Actuary of the Company, for the deducing of some of the formulæ used, and the oversight of a considerable part of the work.

D. H. WELLS,

Actuary.

APPENDIX.

NOTATION AND FORMULÆ.

i = rate of interest realized annually.

v = present worth of 1 payable one year hence.

$(—)_x$ = (—) at age x.

${}_n(—)$ = (—) continuing n years.

${}_{m|}(—)$ = (—) deferred m years.

l = number living.

d = number dying.

p = probability of living one year.

${}_n p$ = probability of living n years.

q = probability of dying within one year.

${}_n q$ = probability of dying within n years.

${}_{m|}q$ = probability of dying within one year after the expiration of m years, that is, in the $(m+1)$th year.

${}_{m|n}q$ = probability of dying within n years after the expiration of m years.

e = curtate expectation of life.

$\mathring{e}$ = complete expectation of life.

Π = general expression for the single premium to secure, or present value of any required benefit.

π = general expression for the premium to be paid at given times, whether of uniform amount or otherwise, to secure any required benefit or benefits.

(wl) = general expression for the benefit to be received, whether of uniform amount or otherwise, by one living.

(wd) = general expression for a benefit payable at the end of the year in which death occurs.

---

a_∞ = single premium to secure, or present value of 1 payable at the end of each year : a perpetuity.

a = single premium to secure, or present value of 1 payable at the end of each year during life : a (life) annuity.

$1+a$ = single premium to secure, or present value of 1 payable at the beginning of each year during life : a (life) annuity immediate.

${}_n a$ = single premium to secure, or present value of 1 payable at the end of each year for n years, if the life continues : a temporary annuity.

$1+{}_{n-1} a$ = single premium to secure, or present value of 1 payable at the beginning of each year for n years, if the life continues : a temporary annuity immediate.

${}_{m|} a$ = single premium to secure, or present value of an annuity deferred m years, the first payment to be made at the end of $m+1$ years : a deferred annuity.

${}_{m|n} a$ = single premium to secure, or present value of a temporary annuity deferred m years : an intercepted annuity.

$(\mathrm{I}a)$ = single premium to secure, or present value of an annuity beginning with 1 and increasing by 1 each year.

A = single premium to secure, or present value of 1 payable at the end of the year in which death occurs.

${}_n\mathrm{A}$ = do., if death occurs within n years.

${}_{m|}\mathrm{A}$ = do., if death occurs after m years.

${}_{m|n}\mathrm{A}$ = do., if death occurs within n years after the expiration of m years.

${}_n\mathrm{E}$ = single premium to secure, or present value of 1 payable n years hence if the life survives.

${}_n(\mathrm{AE})$ = do., or at the end of the year in which death occurs, if within n years.

(IA) = single premium to secure, or present value of as many units, payable at the end of the year in which death occurs, as there have years elapsed ; *i. e.*, 1, if death

occurs the first year ; 2, if death occurs the second year, etc.

${}_{n}(\mathrm{IA})$ = do., if death occurs within n years.

${}_{m|}(\mathrm{IA})$ = single premium to secure, or present value of 1 if death occurs in the $(m+1)$th year, 2 if death occurs in the $(m+2)$nd years, 3 if death occurs in the $(m+3)$rd year, etc., payable at the end of the year in which death occurs.

${}_{m|n}(\mathrm{IA})$ = do., if death occurs within n years after the expiration of m years.

P = annual premium for life to secure 1 payable at the end of the year in which death occurs.

${}_{r}\mathrm{P}$ = annual premium for r years, if the life survives, to secure 1 payable at the end of the year in which death occurs.

In General :

P(——) = annual premium, to continue until the termination of the insurance, to secure or equivalent to (——).

${}_{r}\mathrm{P}$(——) = annual premium for r years, if the life survives, to secure or equivalent to (——).

Thus : —

$\left.\begin{array}{r} \mathrm{P}_{n}\mathrm{A} \\ \mathrm{P}_{m|}\mathrm{A} \\ \mathrm{P}_{m|n}\mathrm{A} \\ \mathrm{P}_{n}\mathrm{E} \\ \mathrm{P}_{n}(\mathrm{AE}) \\ \mathrm{P}\ (\mathrm{IA}) \end{array}\right\}$ = annual premium, to continue until the termination of the insurance, equivalent to the single premium. $\left\{\begin{array}{l} {}_{n}\mathrm{A} \\ {}_{m|}\mathrm{A} \\ {}_{m|n}\mathrm{A} \\ {}_{n}\mathrm{E} \\ {}_{n}(\mathrm{AE}) \\ (\mathrm{IA}) \end{array}\right.$

$\left.\begin{array}{r} {}_{r}\mathrm{P}_{m}a \\ {}_{r}\mathrm{P}_{n}\mathrm{A} \\ {}_{r}\mathrm{P}_{m|}\mathrm{A} \\ {}_{r}\mathrm{P}\,(\mathrm{IA}) \end{array}\right\}$ = annual premium for r years, if the life continues, equivalent to the single premium. $\left\{\begin{array}{l} {}_{m}a \\ {}_{n}\mathrm{A} \\ {}_{m|}\mathrm{A} \\ (\mathrm{IA}) \end{array}\right.$

The expressions for premiums may also be used, when there is no danger of confusion or misapprehension from such use, for the insurance which they represent or will secure. They are so used in the notation and formulæ for reserves and cost of insurance which follow.

${}_sV(\text{——})$ = reserve at the end of s years after issue on (——).

Thus:—

${}_sV_{m|}a$ = reserve at the end of s years after issue on (an annuity represented by, or secured by the single premium) ${}_{m|}a$.

$$\left.\begin{matrix} {}_sVP \\ {}_sV_rP \\ {}_sVP_nA \\ {}_sVP(IA) \\ {}_sV_rP_nA \end{matrix}\right\} = \text{reserve at the end of } s \text{ years after issue on } \left\{\begin{matrix} P \\ {}_rP \\ P_nA \\ P(IA) \\ {}_rP_nA \end{matrix}\right.$$

${}_sK(\text{——})$ = cost of insurance (contribution to the payment of death claims), in the sth year after issue, on (——).

${}_s(AK)\ (\text{——})$ = present value of the future annual costs of insurance on (——) s years after issue: insurance value.

Thus:—

$$\left.\begin{matrix} {}_sK\,P \\ {}_sK\,(IA) \\ {}_sK_n(AE) \\ {}_sK\,P_nA \\ {}_sK_rP \end{matrix}\right\} = \text{cost of insurance in the } s\text{th year after issue on } \left\{\begin{matrix} P \\ (IA) \\ {}_n(AE) \\ P_nA \\ {}_rP \end{matrix}\right.$$

$$\left.\begin{matrix} {}_s(AK)\ P \\ {}_s(AK)\ {}_n(AE) \\ {}_s(AK)\ {}_rP \end{matrix}\right\} = \text{insurance value } s \text{ years after issue on } \left\{\begin{matrix} P \\ {}_n(AE) \\ {}_rP \end{matrix}\right.$$

$$v = \frac{1}{1+i}.$$

$$l_x = l_{x+1} + d_x = \frac{l_{x+1}}{p_x} = \frac{1+e_{x+1}}{e_x}\, l_{x+1} = \frac{1+a_{x+1}}{(1+i)a_x}\, l_{x+1}$$

$$= \frac{1-\mathrm{A}_{x+1}}{1-(1+i)\mathrm{A}_x}\, l_{x+1}.$$

$$d_x = l_x - l_{x+1} = l_x\, q_x = l_x\,(1-p_x).$$

$$p_x = 1 - q_x = \frac{l_{x+1}}{l_x} = 1 - \frac{d_x}{l_x} = \frac{e_x}{1+e_{x+1}} = \frac{(1+i)a_x}{1+a_{x+1}} = \frac{\mathrm{D}_{x+1}}{v\mathrm{D}_x}.$$

$$q_x = 1 - p_x = \frac{d_x}{l_x} = 1 - \frac{l_{x+1}}{l_x} = \frac{\mathrm{C}_x}{v\mathrm{D}_x}.$$

$${}_np_x = 1 - {}_nq_x = \frac{l_{x+n}}{l_x} = \frac{\mathrm{D}_{x+n}}{v^n\mathrm{D}_x}.$$

$${}_nq_x = 1 - {}_np_x = \frac{l_x - l_{x+n}}{l_x} = 1 - \frac{\mathrm{D}_{x+n}}{v^n\mathrm{D}_x}.$$

$${}_{m|}q_x = {}_mp_x \cdot q_{x+m} = \frac{d_{x+m}}{l_x} = \frac{\mathrm{C}_{x+m}}{v^{m+1}\mathrm{D}_x}.$$

$${}_{m|n}q_x = {}_mp_x \cdot {}_nq_{x+m} = \frac{l_{x+m} - l_{x+m+n}}{l_x}.$$

$$e_x = \frac{l_{x+1}+l_{x+2}+l_{x+3}+\&c.}{l_x} = p_x\,(1+e_{x+1}).$$

$$\mathring{e}_x = \frac{l_{x+1}+l_{x+2}+l_{x+3}+\&c.}{l_x} + \frac{1}{2} = e_x + .5.$$

$$\mathrm{C}_x = v^{x+1}\, d_x = v^{x+1}\,(l_x - l_{x+1}) = v\mathrm{D}_x - \mathrm{D}_{x+1} = \frac{d_x}{v^n\, d_{x+n}}\, \mathrm{C}_{x+n}.$$

$$\mathrm{D}_x = v^x\, l_x = \frac{\mathrm{D}_{x+n}}{v^n\, {}_np_x} = \frac{\mathrm{D}_{x+1} + \mathrm{C}_x}{v}.$$

$$\mathrm{M}_x = \mathrm{C}_x + \mathrm{C}_{x+1} + \mathrm{C}_{x+2} + \&c. = \mathrm{M}_{x+1} + \mathrm{C}_x = v\,\mathrm{N}_x - \mathrm{N}_{x+1}$$

$$= \mathrm{D}_x - (1-v)\,\mathrm{N}_x.$$

$$\mathrm{N}_x = \mathrm{D}_x + \mathrm{D}_{x+1} + \mathrm{D}_{x+2} + \&c. = \mathrm{N}_{x+1} + \mathrm{D}_x.$$

$$R_x = M_x + M_{x+1} + M_{x+2} + \&c. = R_{x+1} + M_x$$

$$= C_x + 2\,C_{x+1} + 3\,C_{x+2} + \&c.$$

$$= v\,S_x - S_{x+1} = N_x - (1-v)\,S_x .$$

$$S_x = N_x + N_{x+1} + N_{x+2} + \&c. = S_{x+1} + N_x$$

$$= D_x + 2\,D_{x+1} + 3\,D_{x+2} + \&c.$$

$${}_{x+n}M_x = M_x - M_{x+n} = C_x + C_{x+1} + C_{x+2} + \ldots + C_{x+n-1} .$$

$${}_{x+n}N_x = N_x - N_{x+n} = D_x + D_{x+1} + D_{x+2} + \ldots + D_{x+n-1} .$$

$${}_{x+n}R_x = R_x - R_{x+n} = M_x + M_{x+1} + M_{x+2} + \ldots + M_{x+n-1}$$
